SUMMARY

Frontend engineer with 4 years of React and TypeScript, owning complex product frontends end to end across AI-native SaaS and Web3. Took an AI underwriting workstation from demo to production beta at Qlo; built NFT trading and launch products at Lootex processing $1M+ in volume and 100K+ on-chain claims. Uses Claude Code and Cursor daily, capturing architecture decisions in project rules so AI-generated code arrives review-ready.

WORK EXPERIENCE

Frontend Engineer - Qlo (YC S26) Jan 2026 - May 2026

- Owned the frontend of an AI-native underwriting workstation as the sole frontend engineer, consolidating carrier workflows previously split across legacy tools and spreadsheets.
- Extended the submission workflow from quote to bind, adding custom quote options, binders, and invoices.
- Designed a schema-driven quote form for per-client variations and improved premium calculation; proposed a backend-served schema contract for SaaS scale.
- Redesigned the login flow with 2FA and built broker management features.
- Proposed bringing engineering into design reviews before specs were finalized under compressed timelines; the team adopted it, surfacing spec ambiguities earlier.

Frontend Engineer - Lootex Jul 2022 - Dec 2025

- Developed an NFT trading platform ($1M+ volume, 100K+ on-chain claims), integrating smart contracts with precise price and balance calculations.
- Solely built Lootex Studio, a no-code NFT launch platform with failure-resumable on-chain publishing; shipped partner launches including Soneium.
- Co-built a Storybook design system of accessible, responsive Tailwind components, and reviewed code to keep usage consistent.
- Built and maintained the frontend deployment and release pipeline, with preview environments for independent cross-team validation.
- Led frontend for Web3 game FizzPop with a focus on rendering performance; the game reached 39% Day-1 retention (3-4x category average).

SKILLS

Frontend Core: React, Next.js, TypeScript, JavaScript (ES6+), Tailwind CSS, RWD
Forms & State: TanStack Query, React Hook Form, Zod, Zustand
Web3: wagmi, viem, smart contract integration
Testing & Deployment: Vitest, Playwright, GitHub Actions, Vercel, Sentry
Tools: Git, Figma, Storybook, Claude Code, Cursor
Languages: Chinese (native), English (professional)

EDUCATION & TRAINING

Frontend Engineer Program — AppWorks School Jan 2022 - Jun 2022

Master of Public Relations & Advertising — UNSW Sydney, Australia Jul 2015
