SUMMARY

Frontend engineer with 4 years of React and TypeScript, building data-dense B2B tools across AI-native SaaS and Web3. Took an AI underwriting workstation from demo to production beta at Qlo; shipped NFT trading products at Lootex processing $1M+ in volume and 100K+ on-chain claims. Uses Claude Code and Cursor as part of daily development, capturing architecture decisions and conventions in project rules so AI-generated code arrives review-ready.

WORK EXPERIENCE

Frontend Engineer - Qlo (selected for YC S26) Jan 2026 - May 2026

- Owned the frontend of an AI-native underwriting workstation, from demo to production beta, centralizing carrier workflows to replace fragmented legacy tools and spreadsheets; the product was later selected for Y Combinator's S26 batch.
- Built review UIs for LLM-based document extraction pipelines, enabling underwriters to verify and correct auto-generated submissions quickly and confidently.
- Built a schema-driven form and premium calculation engine with React Hook Form and Zod, handling deeply nested data structures with synchronized multi-step workflows.

Frontend Engineer - Lootex July 2022 - Dec 2025

- Developed an NFT trading platform handling $1M+ in transaction volume, integrating smart contracts and handling numeric precision in price and balance calculations.
- Built a no-code NFT launch platform with a 4-step on-chain publish flow, deriving resume state from on-chain data so users could continue after a mid-flow failure.
- Developed a Tailwind CSS design system with Storybook, standardizing accessible UI components and shortening development cycles across a 3-person frontend team; reviewed teammates' code for consistent component usage.
- Led frontend for Web3 game FizzPop, optimizing rendering performance for a smooth gameplay experience; the game reached 39% Day-1 retention (3-4x category average).

SKILLS

Frontend Core: React, Next.js, TypeScript, JavaScript (ES6+), Tailwind CSS
Forms & State: TanStack Query, React Hook Form, Zod
AI-assisted Development: Claude Code, Cursor
Web3 Integration: viem, wagmi
Tools: Git, GitHub Actions, Figma, Storybook
Languages: Chinese, English

EDUCATION & TRAINING

Master of Public Relations & Advertising — UNSW Sydney, Australia 2015

Frontend Engineer Program — AppWorks School Jan 2022 - June 2022

- Completed 1,000+ hours of immersive full-time training (<10% acceptance rate); independently built and launched a personal project in 5 weeks using Scrum.
